EDUCATION

Graphic Era Hill University

Dehradun, India

Bachelor of Technology in Computer Science; CGPA: 8.03/10

2024 – 2028

Relevant Coursework: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, Object-Oriented Programming, Theory of Computation, Computer Architecture, Design & Analysis of Algorithms

PROJECTS

JobHunt — Full-Stack Job Platform | *Java, Spring Boot, PostgreSQL, Redis, Kafka, Flutter, Docker* 2026

- Architected a full-stack hiring platform for blue-collar jobs, spanning a modular Spring Boot backend (9 REST controllers across auth, jobs, applications, and notifications) and an 18-screen Flutter Android client
- Engineered stateful authentication with JWT access + refresh-token rotation and Google/GitHub OAuth2, hardened by a custom security filter chain, email-OTP verification, and per-client rate limiting
- Built an event-driven notification pipeline on Apache Kafka with idempotent consumers and Firebase Cloud Messaging push delivery, decoupling application-status updates from the request path
- Optimized the job feed with Redis caching and a Haversine bounding-box geo-filter, backed by 12 versioned Flyway migrations adding indexes and soft-delete/idempotency guarantees
- Automated delivery via Docker Compose, a Jenkins CI pipeline, and Qodana static-analysis merge gates; documented all endpoints with OpenAPI/Swagger

Distributed Job Board — Microservices | *Java, Spring Cloud, OpenFeign, Zipkin, PostgreSQL* 2026

- Decomposed a job-board domain into 5 Spring Cloud services (Job, Company, Reviews) behind a Netflix Eureka service registry and a centralized Spring Cloud Config Server
- Implemented resilient inter-service communication with declarative OpenFeign clients, aggregating Company and Reviews data into the Job service through service discovery
- Instrumented end-to-end distributed tracing with Micrometer Tracing + Brave and Zipkin, exposing health and metrics endpoints via Spring Boot Actuator

MakeShift — AI Toolkit | *Java, Spring Boot, Spring AI, React 19 (Vite), Deepgram* 2026

- Built a full-stack AI toolkit unifying four tools — chat assistant, recipe generator, image generator, and voice studio — behind a single OAuth2/JWT login on a Spring Boot + React 19 stack
- Integrated Spring AI's ChatModel and PromptTemplate abstractions against Google Gemini for conversational chat and structured, reusable recipe-generation prompts
- Handled binary AI outputs end-to-end — generated image bytes and Deepgram MP3 speech — streaming them to the React client via a reusable Blob/object-URL pattern

Tech-Buddy — Multimodal Screen Assistant | *Python, Gemini Vision, PyAutoGUI* 2025

- Built a voice-driven desktop assistant that captures the screen, queries a Gemini vision model, and overlays step-by-step guidance by parsing returned (x, y) coordinates with PIL
- Added a hands-free action mode using PyAutoGUI automation with SpeechRecognition and pyttsx3 for voice commands and text-to-speech feedback

TECHNICAL SKILLS

Languages: Java, Python, C, C++, Dart, JavaScript, SQL, HTML/CSS

Frameworks & Libraries: Spring Boot, Spring Cloud, Spring Security, Spring AI, Flutter, React, REST APIs

Databases & Messaging: PostgreSQL, Redis, H2, Apache Kafka

Developer Tools: Git, GitHub, Docker, Jenkins, Maven, Postman, Flyway, Zipkin, Swagger/OpenAPI

Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Microservices, System Design, CI/CD, Application Security (Auth/Authz)

ACHIEVEMENTS

- Solved **300+** problems on LeetCode (C++, Java) across DP, Graphs, and Backtracking; peak contest rating **1610** (top 22%) with 50-day and 100-day consistency badges
- Placed in the **Top 10** teams out of 100 at the Hack-o-Holic hackathon
