Education

Graphic Era Hill University Dehradun, India
Bachelor of Technology in Computer Science; CGPA: 8.03/10 *2024 – 2028*

- **Relevant Coursework:** DSA, OOP, DBMS, OS, Computer Networks, Design & Analysis of Algorithms

Projects

MakeShift: AI Toolkit (RAG) | *Java, Spring Boot, Spring AI, pgvector, React* Live Demo | Aug – Oct 2026

- Built a retrieval-augmented generation (RAG) pipeline for document Q&A that parses user-uploaded PDF/TXT/Markdown files with Apache Tika, chunks and embeds them with Gemini, and retrieves top-k matches from pgvector in PostgreSQL to ground answers
- Guarded against hallucination with a similarity threshold and a context-only prompt so the assistant declines when nothing relevant is found, and isolated each user's documents by tagging chunks with the owner's ID and filtering at retrieval
- Unified five AI tools (chat, recipes, image generation, speech-to-text/text-to-speech, document Q&A) behind one OAuth2/JWT flow and a responsive React UI, using Spring AI's ChatModel and PromptTemplate with Gemini

Distributed Job Board: Microservices | *Java, Spring Cloud, RabbitMQ, Kubernetes* GitHub | Aug – Oct 2026

- Decomposed a job-board domain into 6 independently deployable Spring Boot services, each business service with its own PostgreSQL database, using Gateway routing, a Eureka registry, and a Git-backed Config Server
- Improved resilience by decoupling review submissions from company-rating updates with RabbitMQ, using OpenFeign for synchronous calls and Resilience4j circuit breakers for dependency failures
- Containerized the stack with Docker Compose, added Zipkin distributed tracing for observability, and wrote Kubernetes manifests (Deployments, Services, Postgres StatefulSet with PVC)

JobHunt: Job Platform | *Java, Spring Boot, PostgreSQL, Redis, Flutter* GitHub | May 2025 – Dec 2025

- Built a blue-collar hiring platform with 9 REST controllers on Spring Boot and PostgreSQL and an 18-screen Flutter Android client covering authentication, jobs, applications, and notifications
- Secured APIs with JWT access/refresh-token rotation, Google/GitHub OAuth2, email-OTP verification, and Redis-backed rate limiting on login and signup; decoupled notifications from the request path using after-commit async event listeners and Firebase Cloud Messaging push delivery
- Optimized the job feed with Redis caching and a Haversine geo-filter backed by 12 Flyway migrations; automated delivery with Docker Compose, Jenkins CI, and Qodana merge gates, with OpenAPI/Swagger documentation

ReachClock: Trip Alarm & Sharing | *Java, Spring Boot, WebSocket, React Native* GitHub | Oct 2026 – Present

- Built a location-based alarm app that fires arrival, ETA-before, and departure alarms from live GPS, using STOMP/WebSocket streaming, Haversine geofencing, and a React Native client on a Spring Boot backend
- Reduced repeated Google Routes API calls with a 20-second ETA cache and OSRM fallback, prevented duplicate alarms under concurrent updates with striped per-trip locks, and secured trip sharing with hashed bearer tokens and 14 JUnit/MockMvc tests

Technical Skills

Languages: Java, Python, C, C++, JavaScript, Dart, SQL, HTML/CSS
Frameworks: Spring Boot, Spring Cloud, Spring Security, Spring AI, Flutter, WebSocket/STOMP
AI / LLM: RAG, Vector Search (pgvector), Prompt Engineering, Google Gemini API, Spring AI; **AI Coding Tools**: GitHub Copilot, Claude Code
Cloud & DevOps: Docker, Kubernetes, Jenkins (CI/CD), Zipkin, Flyway, Git, Maven
Databases & Messaging: PostgreSQL, MySQL, MongoDB, Redis, H2, RabbitMQ, Kafka
Testing & APIs: JUnit, MockMvc, Postman, REST, Swagger/OpenAPI
Concepts: DSA, OOP, DBMS, OS, Networks, Microservices, Distributed Systems, System Design

Achievements

- Solved 320+ LeetCode problems (C++, Java) across DP, Graphs, Backtracking; peak contest rating 1610 (top 22%)
- Competed in multiple team hackathons, splitting work across backend, frontend and demo; placed in the Top 10 teams out of 100 at Hack-o-Holic
